

Design starter — EPD-2389

The fast path into Exit Radar for design. Read this, then the mock attached to [EPD-2389](<https://linear.app/vequity/issue/EPD-2389/ship-exit-radar-v1-monthly-who-is-buying-in-your-space-report>).

The full contract lives in the [PRD](<https://linear.app/vequity/document/prd-608b61122cba>) — its **Design brief** section lists what's yours to decide.

The concept

A monthly report that answers, for one company: **who is buying companies like mine, why, and what changed since last month.** It must feel like evidence, not AI prose — every claim carries a source, and nothing rendered is a guess.

The page is five questions

Question the user is asking	Answered by
Who's active in my space?	Up to 6 buyer cards — name, Strategic/PE label, deal count, largest disclosed value, capability chips (green = what I have that they buy), one-line buying thesis
What did they actually buy, and why?	A table of sourced transactions — date, buyer → target, capabilities added, value where disclosed, the buyer's stated reason as a quote, a source link
How busy is my space?	3 stat tiles — deals in the window, % strategic, % PE
What's new since last time?	The delta: new deals, new buyers, buyers with more deals since the last refresh — placement is yours (own section or woven in)
When does this update happen again?	A next-update date in the header, plus "Watch this space" to get the refresh email

States to design

- Loading
- "Being prepared" placeholder (no report yet — copy is yours; no error language, no promised date)
- Dense ready (the mock)
- Sparse ready — the common real case: few rows, no chips, values all "n/d"
- 5-year fallback (thin space → wider window, labeled in the deal-count tile)
- Quiet month (refresh ran, nothing new — page and email both say so)

Plus the one email: refresh notification leading with the change headline ("3 new deals, 1 new buyer in your space") linking to the page.
